

# Glass giant Encirc warns energy costs could surge to £100m

Energy costs could surge by £60m every year, one of Europe's largest glass plants has predicted.

Adrian Curry, managing director at Encirc, which has a base in Cheshire, said the firm has seen "huge increases" to its natural gas and electricity costs. This forces it to pass on the increases to brand owners, retail outlets and consumers.

In an interview with BBC Radio 4's Today programme, he said the problem is that "there seems to be no cap to it and it's continuing to rise on an almost weekly basis".

He added: "Generally we will have contracts for 12 months at a time, so we're having to look at what contracts are offering... how we can pass these price increases on and how can we can protect our business in that regard.

"Our businesses is not at risk, per se, but our profitability is being hit hard."

Questioned about how much the company's energy bills have gone up by, he said: "We would normally spend about £40m a year in energy.

"If we look forward today we're seeing increases that mean we could be spending up to £100m on a like-for-like basis."

He added he was not asking for a bailout but was outlining what he was seeing across the glass sector and other sectors, reports the PA news agency.

“I think without an intervention of some sort I can see a situation where it’s going to be extremely difficult for a lot of companies and it’s going to really affect supply chains going forward,” he added.

Stephen Elliott, chief executive of the Chemical Industries Association, said the suggestion to move the green levy from electricity to gas would “not be a helpful intervention right now”.

## Step forward for historic Chester plans

He told the programme: “When the wind doesn’t blow, gas is required as a backup. In the UK, we actually have greater dependency on gas as a backup than other countries.

“There’s a very short-term requirement to solve this issue to get us through the winter and a bit beyond, and then a discussion around shifting costs right in the middle of that is, we believe, not helpful.”

He added that the talk of the Government supporting the industry with a £2 billion cash injection was actually a “historic compensating measure” as a result of a move towards renewables.

“We’re not looking for a bailout, we think there are some very practical things we can do and that includes addressing some of the network costs and working with Beis and Ofgem,” he said.
