

Washington's Turnmill Engineering unveil plans to expand into offshore wind supply chain

A North East engineering company has launched plans to expand into the offshore wind sector as it explores new markets.

Turnmill manufactures fixtures and machine components predominantly for automotive, pharmaceuticals, motorsport and construction businesses, while also helping companies and individuals to develop concepts and prototypes.

Now the firm, based at Washington Business Centre, Sunderland, has plans to widen its customer base with a focus on the offshore wind industry sectors, with aims to work with manufacturers and supply chain companies, to support their product developments and production programmes.

Its drive for growth also includes increasing its annual turnover from £250,000 to £2.5m, and owning its own factory by 2025.

The company currently employs eight, which it plans to increase in the coming months across technical and administrative roles.

Turnmill – which has become a member of NOF, the UK business development organisation for the energy sector – has also recently secured a grant from Scale Up North East to support the acquisition of additional production equipment.

Andrew Howe, Turnmill co-founder and operations director, said: “When Turnmill was founded three years ago its customers

were primarily in the automotive sector. Since then, we have diversified to embrace other sectors and we intend to continue this strategy by branching out to attract custom from the offshore wind industry.

“The sector is growing at a pace and the North East is becoming a real focal point for offshore wind activity, which presents our business with the opportunity to achieve our strategic target of becoming the region’s jig and fixture manufacturer of choice.

“NOF’s expertise and extensive network will help us gain a foothold in the sector by helping to raise our profile and make valuable connections within the industry and across the supply chain.”

Paul Livingstone, NOF’s head of business development and membership, said: “There are a wealth of opportunities in the offshore wind sector for innovative and collaborative companies. Turnmill has the knowledge, skills, ability to innovate and manufacturing capabilities that are transferable to capitalise on what is happening in the sector.

“Its track record demonstrates that it is adept at broadening its business base into new marketplaces and NOF will work with Turnmill, as we do all our members, to provide support, industry insight and connections that will help them achieve its ambition for growth.”

Sign up for your daily BusinessLive North East newsletter

You can get all the day's business news from the North East sent to your email inbox each morning.

By [signing up](#) here, we will deliver the headlines from companies in Tyne and Wear, Northumberland, County Durham and Teesside straight to your email inbox every morning.

Our specialist team of business writers will bring you stories from a range of sectors, reporting on companies large and small.
