

Lenses in Glasses Launches 3 Exciting New Lenses

3 new lenses launched by Lenses in Glasses introduce some exciting new technologies and provide customers with even more choice.

A leading lens specialist in the UK has recently introduced three new types of lenses to its collection. Lenses in Glasses, which specialises in fitting frames with a wide range of lenses, is now providing its customers with three specialist lenses: Blue Protect, Mesh Technology and Drivesense.

Blue Protect Lenses are designed to help shield the eyes from harsh lights, especially when using a computer, tablet or phone, thanks to their advanced blue light lens technology.

Many people use screens for hours every day, but high-energy blue light can lead to headaches and eyestrain. It can also affect the production of melatonin, which can disrupt sleeping patterns. Blue Protect lenses filter out the harmful blue light, managing the light entering the eye and helping to produce less eye strain, leading to more comfortable viewing.

Mesh Technology Lenses with their patented mesh technology coating allow the light to be distributed from different areas of the lens, helping to improve vision and reduce eye fatigue.

The lenses appear clear, and they can be used as everyday glasses, but they are especially suitable when driving at night, working in low light conditions or using a computer. They provide sharper vision, help to reduce glare, provide UVA and UVB protection and are also scratch-resistant.

Drivesense Lenses are the perfect lens for all driving conditions, including driving in the day or at night. Their

night vision zone helps to reduce visual fatigue when driving at night, and they provide improved vision fields.

These lenses lead to better vision of the dashboard and mirrors. They are suitable for anyone who spends a lot of time driving, who suffers from visual fatigue when driving or who struggles when driving in low light conditions.

These three lenses are just the latest types of specialist lenses provided by Lenses in Glasses. They have been added to the collection to provide customers with an even greater choice of lens technology.

David Syme, the owner of Lenses in Glasses, said: "We are thrilled to add these three new types of lenses to our collection. It's important for us to provide our customers with the very latest in lens technology to make their lives easier and more comfortable for a wide range of activities. We can fit any of these lenses, as well as many other types of lenses, to a wide range of frames. And because our service is online, our customers don't even need to leave their homes."

The Blue Protect, Mesh Technology and Drivesense lenses are now available at the Lenses in Glasses website.
